Harold Weisburg
Frederick, MD

Dear Harold,

I would like to thank you for the enlightening conversation that we shared a couple of weeks ago with you at your home. I will be moving to Indiana just before the NSA Congress therefore I will not have a chance to speak to you again.

Enclosed is the information that you requested on the Spectragraph, and on Neutron Activation Analysis. I am enclosing the complete chapter on this subject so that you have a complete reference on this matter. The material is taken from text I used in a class on Criminal Investigation, if I remember right the Prof. said that this text is that leading text in the subject of Criminal Investigation.

I hope that you will find the information helpful to your cause.
Good luck in your endeavors.

Sincerely

A handwritten signature in cursive script, appearing to read "L. Beu".

8/15/75

Dear Liz,

What you sent is quite helpful. I incorporated about 1,000 words based on it in the addition I'm writing to Post Mortem, a book I expect to be able to bring out soon. For this it is superior to other literature I had.

If you are near a library or know students who are willing to help, what we still need for the litigation is the "how to" from a standard text not necessarily from criminalistics texts but more likely from those on chemistry or physics.

Jim and I work long days on many things and just can't get to do this kind of relatively simple library work. (My days usually begin about the time his end, about 4 a.m.)

The local profs are too concerned about retaliation and the local experts work for the government.

You were helpful. For this and more for the willingness, thanks.

Best regards,

P.S. Tomorrow they renumber the local rural routes. Should you have occasion to write, ours will be ~~XX~~ # 12.
